CPR VALVE

The CPR valve can be released when CPR is being performed. It quickly deflates the mattress giving a hard surface in order to carry out the procedure.

WELDED SEAMS

Regular sewn seams are ideal for bacteria to grow in because of all the holes. Welded seams are melted or welded together using high frequency vibrations meaning there are no holes or gaps for bacteria to get into. This helps reduce the spreading of infection.

FULLY DIGITAL PUMP

Static mode, inflates all of the cells in the mattress and keeps them consistently inflated. Alternating pressure, alternates the inflation and deflation between the cells in an A/B pattern.
